Michelle,

Per our call today here's some information on the proposed project at Station Siuslaw River. The hillside is sloughing and we are concerned. I've contacted you early to find out what your timeline for review of the City Planning Affidavit that is part of the Corps Permit process. I'd also like to know if the fee will be higher than \$50 - legal needs to review all fees so I may need some additional information on that fees - that's just how it is.

We're discussing both riprap and a bulkhead. It sounds like cost will push us to the bulkhead.

I've attached an aerial photo and embedded some photos of the erosion areas that are causing sloughing of the bank.

You can see how the piles have become exposed in the one below.

I should have more information in December.
Have a great Thanksgiving,
roy
