

Project Description

The shoreline at Coast Guard (CG) Station Siuslaw River, 4255 Coast Guard Rd., Florence, Oregon is eroding. The CG proposes to stabilize the shoreline by placing riprap along about 410 linear feet of shoreline. There is concern that continued erosion will result in the hillside sliding and jeopardize the Station's boathouse and ability to conduct its missions in a safe, operationally efficient and cost-effective manner. Project details are included in the previously provided Joint Permit Application, the Biological Assessment and Environmental Assessment.
