## EXECUTIVE SUMMARY

This report provides the Traffic Impact Analysis and findings prepared for the proposed US Markets gas station and convenience store with an attached drive-through coffee shop located in Florence, Oregon. The subject site is located at Tax Lot 6800 of Assessor's Map 18-12-23-22. This site is approximately 0.99 acres and is currently vacant.

The development proposal is a 3,434-sf convenience store with an attached 2,201-sf coffee shop with a drive-through lane and a gas station with 8 vehicle fueling locations.

The analysis evaluates the transportation impacts per the City of Florence and Oregon Department of Transportation (ODOT) criteria, evaluating adjacent roadway and intersection operations.

## FINDINGS

The following report recommendations are based on the information and analysis documented in this report.

- All intersections meet the applicable operational standards for both the AM and PM peak hours.
- The addition of development trips does not trigger intersection mitigation.
- The addition of development trips does not negatively increase queuing conditions at the study area intersections.
- The crash rates and crash patterns in the study area do not trigger mitigation.

## LIST OF APPENDICES

- APPENDIX A: SCOPE OF WORK
- APPENDIX B: SITE PLAN
- APPENDIX C: CRASH DATA
- APPENDIX D: TRAFFIC VOLUMES
- APPENDIX E: SYNCHRO OUTPUTS
- APPENDIX F: QUEUING OUTPUTS

## 1.0 BACKGROUND

### 1.1 SITE INFORMATION

This report provides the Traffic Impact Analysis and findings prepared for the US Markets gas station and convenience store with an attached drive-through coffee shop located in Florence, Oregon. The site is located on Tax Lot 6800 of Assessor's Map 18-12W-23-22 and is located on the east side of Highway 101 between 35<sup>th</sup> Street and 36<sup>th</sup> Street just north of the Burger King. The site is approximately 0.99 acres and is currently vacant.

Figure 1 contains the site location and vicinity map.

### 1.2 DEVELOPMENT PROPOSAL

The applicant is proposing the construction of a 3,434-sf convenience store with an attached 2,201-sf coffee shop with a drive-through lane and a gas station with 8 vehicle fueling positions.

Access to the site will be via an existing right-in, right-out driveway to Highway 101 and a full-movement driveway to 35<sup>th</sup> Street across from Redwood Avenue. Both accesses are shared with the Burger King located to the south of the project site.

Appendix A contains the site plan.

### 1.3 ANALYSIS SCOPE

As per the City of Florence code FCC 10-1-1-4:E(2)(c), a TIA is required if the development will increase the ADT by 250. As described in Section 4, the site meets the criteria for requiring a Traffic Impact Analysis. Direct access is via Highway 101, which is within ODOT's jurisdiction. Therefore, the scope of work was coordinated with ODOT. Appendix B contains the scope of work letter. The following summarizes the analysis requirements.

Locations evaluated include:

- Highway 101 at 35<sup>th</sup> Street
- Highway 101 at Site Access
- 35<sup>th</sup> St at Site Access/Redwood Street.

The evaluation is prepared for the AM Peak Period (7:00-9:00 AM) and the PM Peak Period (4:00–6:00 PM). The evaluation is prepared for the following time periods:

- Existing conditions, year 2024
- Estimated year of completion, year 2025, with and without the proposed development
- Five-year planning horizon year, year 2030, with and without the proposed development

Analysis includes:

- Level of Service and V/C
- Queuing
- Crash Evaluation
- Turn Pocket Evaluation
- Mitigation Evaluation as necessary

## 2.0 EXISTING INFRASTRUCTURE

### 2.1 STREET NETWORK

Public streets included within the study area are Highway 101 and 35<sup>th</sup> Street. The roadway characteristics within the study area are included in Table 1.

TABLE 1: ROADWAY CHARACTERISTICS WITHIN STUDY AREA

Characteristic	35 <sup>th</sup> Street	Highway 101
<b>Jurisdiction</b>	City	ODOT
<b>Classification</b>	Minor Arterial/ Collector	Statewide Highway
<b>Lanes per Direction</b>	1	2
<b>Center Left-Turn Lane</b>	No	Yes
<b>Restrictions in the Median</b>	None	None
<b>Bike Lanes Present</b>	No	Yes
<b>Sidewalks Present</b>	Yes	Yes
<b>Transit Route</b>	No	No*
<b>On-Street Parking</b>	No	No

\*Transit on Highway 101 north of 42<sup>nd</sup> and south of 35<sup>th</sup>

### 2.2 STUDY INTERSECTIONS

The following intersections are included in this study:

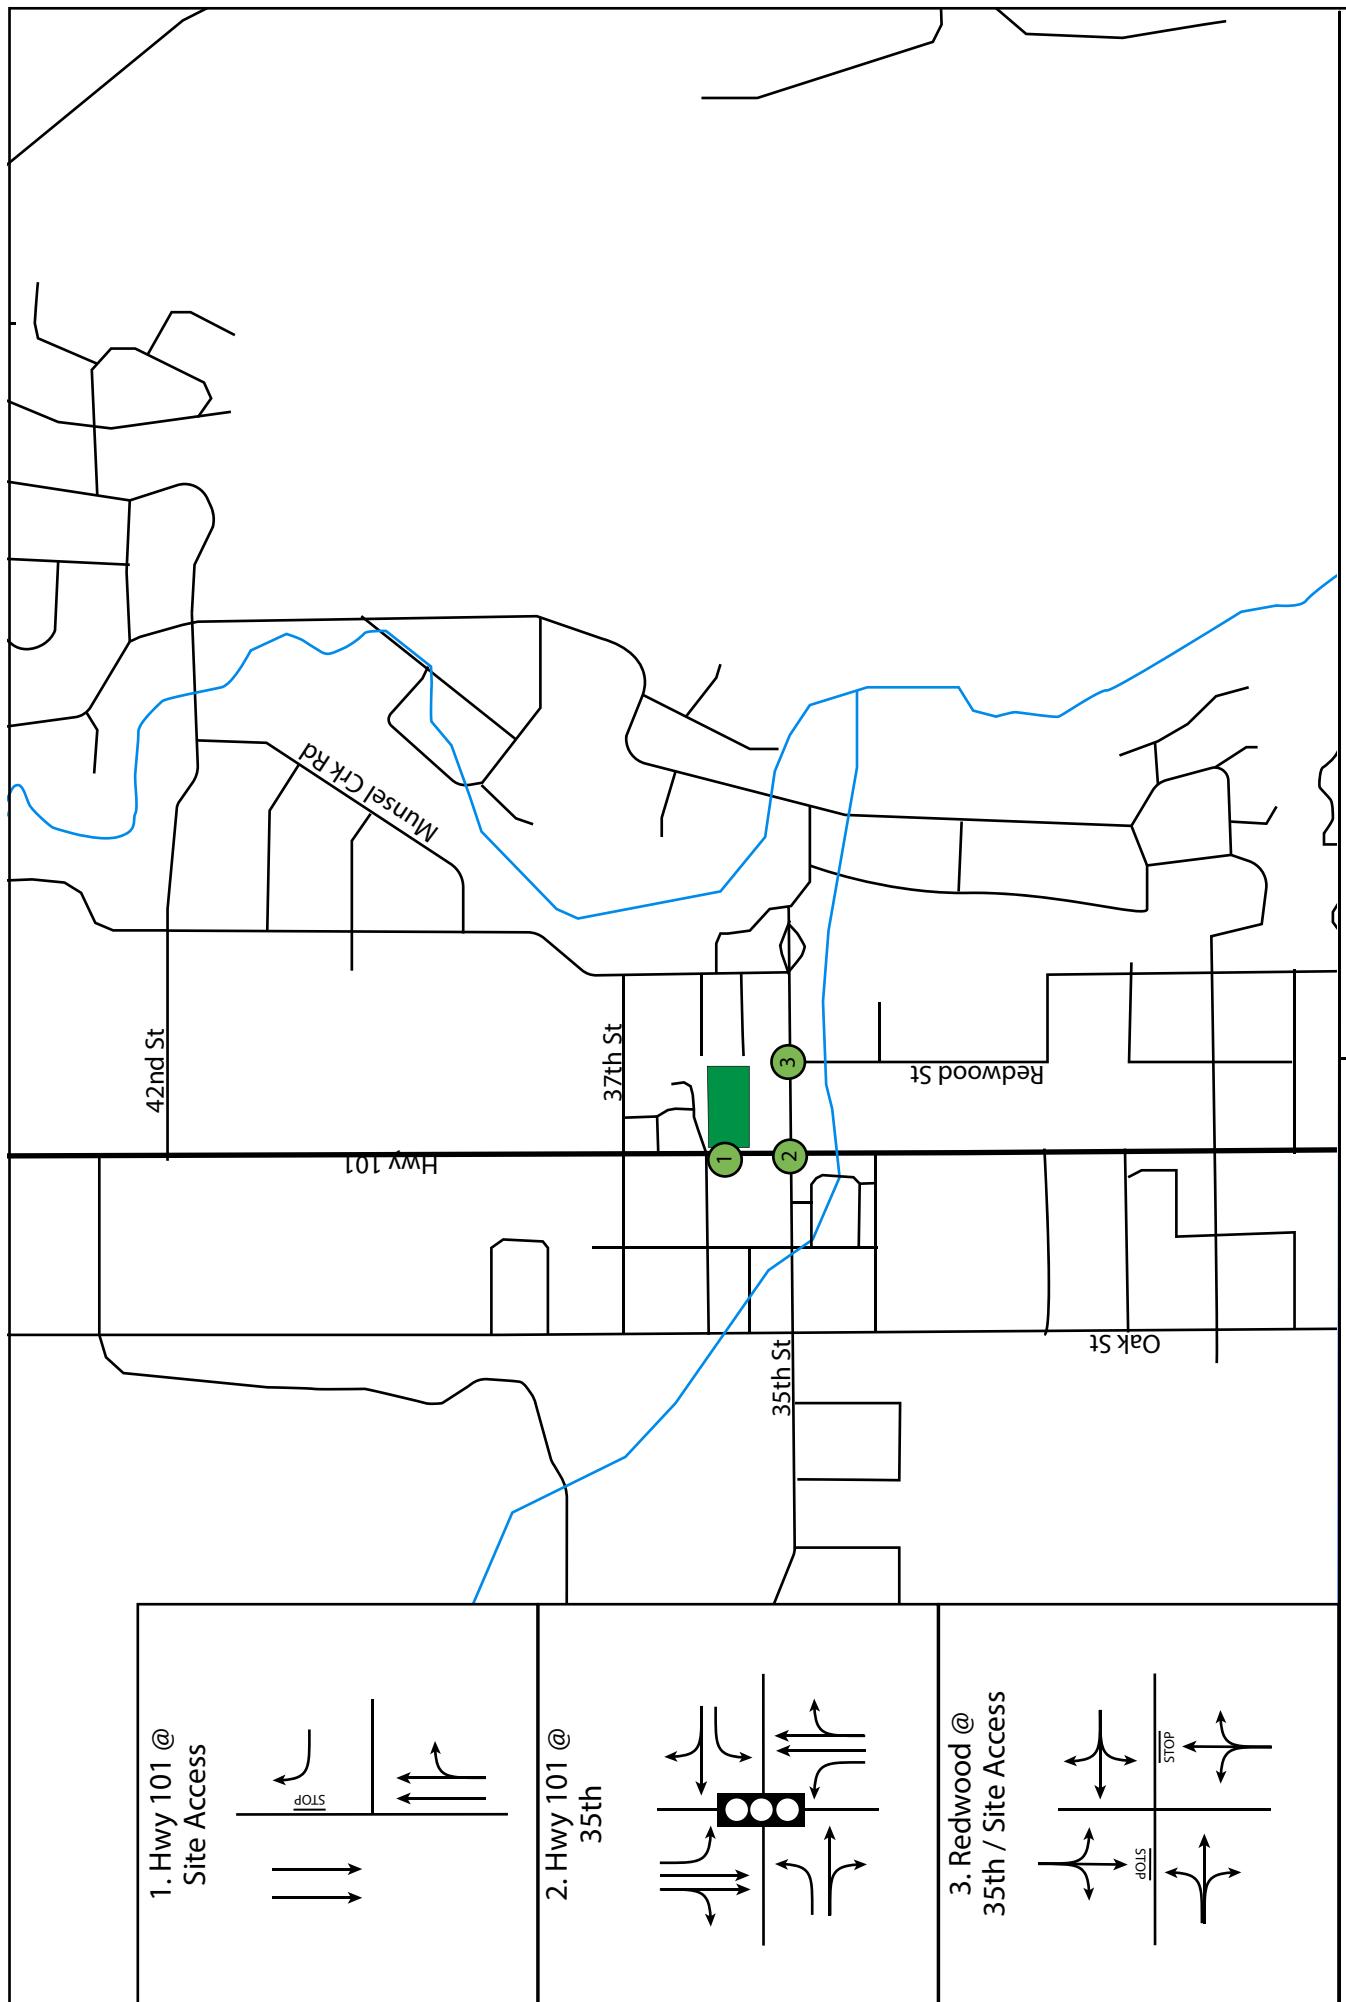

**Highway 101 at 35<sup>th</sup> Street:** This is a 4-legged two-way signalized intersection. This intersection is constructed with one lane and separate left turn lanes on the 35<sup>th</sup> Street approaches, 2 travel lanes and a center turn lane on the Highway 101 approaches, and bike lanes and sidewalks on all approaches.

**35<sup>th</sup> Street at Redwood Street:** The shared full-movement access to 35<sup>th</sup> St is slightly offset to the west from the intersection of Redwood Street. This intersection is a T-intersection with Redwood Street as the stopped approach. This intersection is one lane in each direction.

Figure 2 illustrates the study area intersection geometry and control.

### 2.3 TRANSIT SERVICE

The Rhody Express provides transit service on Highway 101 north of 42<sup>nd</sup> Street and south of 35<sup>th</sup> Street. Service is provided Monday-Friday from 10:00 AM to 6:00 PM.

### 3.0 CRASH ANALYSIS

A crash evaluation was performed for the study area intersections. The analysis investigates crash data available for the most recent 5 years, 1/1/2018-12/31/2022, to determine the crash rate in crashes per million entering vehicles and the type of crashes that occurred. The year 2023 crash data is currently not available for use. The crash analysis follows the HCM Critical Crash Rate methodology. The calculated intersection crash rates are compared to the critical crash rate. If the calculated crash rate exceeds the critical crash rate, the location is considered for further mitigation measures. Crash data was provided by ODOT for the study area and is included in Appendix C. The results of the crash analysis are provided in Table 2. Table 3 provides the crash types.

TABLE 2: INTERSECTION CRASH RATES

Location	Intersection Type	Number of Crashes	ADT	MEV	Crash Rate*	Critical Crash Rate*	
Highway 101 at 35 <sup>th</sup>	Signal	10	15,590	28.45	0.35	0.55	Under
35 <sup>th</sup> at Redwood/Site Access	Stop	0	2,170	3.96	0.00	0.00	

\*(crashes/million entering vehicles)

TABLE 3: INTERSECTION CRASH PATTERNS

Location	Severity			Type				
	PDO	Injury	Fatal	Head	Rear	Turn	Other	Side
Highway 101 at 35 <sup>th</sup>	6	4	0	0	2	2	4	2

PDO=property damage only

There were no reported crashes at the intersection of 35<sup>th</sup> Street at Redwood/Site Access in the past 5 years.

The intersection of Hwy 101 at 35<sup>th</sup> Street has a calculated crash rate below the critical crash rate. There were 10 reported crashes. The crashes were identified as:

- **Rear End:** 2 total, with 1 occurring in the northbound approach and 1 in the southbound approach.
- **Turn:** There were 2 crashes classified as turn-crashes. One involved a southbound through vehicle and a northbound left-turning vehicle. The other crash involved a northbound through vehicle and a southbound left-turning vehicle. The error was assigned to the left-turning vehicle for both crashes.
- **Side:** There were 2 sideswipe collisions. Both collisions involved northbound traveling vehicles.

- **Other:** There were 4 collisions classified as “other” crash types. One crash involved a single vehicle traveling northbound, hitting an adjacent pole. There is no listed reason for this crash occurring. Three crashes involved T-style crashes or “T-bone” crashes. One involved a southbound through vehicle and a westbound through vehicle. The error was assigned to the southbound vehicle. One crash involved a southbound through vehicle and an eastbound through vehicle. The error was assigned to the southbound vehicle. One crash involved a northbound through vehicle and an eastbound through vehicle. The error was assigned to the northbound vehicle.

There are no geometric concerns that likely resulted in the crashes or would be a concern with the added site trips.

## 4.0 DEVELOPMENT TRIP GENERATION AND DISTRIBUTION

### 4.1 DEVELOPMENT TRIP GENERATION

The ITE Trip Generation Manual 11<sup>th</sup> ed is used to estimate the AM peak hour, PM peak hour, and daily trip generation. Tables 4, 5, and 6 provide the trip generation estimates. The most reasonable ITE Land Uses/rates for each use are:

- **945- Convenience Store with Gas Station:** This land use includes the convenience store and fuel pumps only. The convenience store does not include the attached coffee shop. ITE provides trip rates using a subcategory of square feet of the convenience store or vehicle fueling positions. The primary use will be the vehicle fueling stations, with the convenience store as a secondary use. Therefore, the number of vehicle fueling positions is the appropriate subcategory to use. The convenience store square footage is used as the independent variable.
- **937- Coffee/Donut Shop with Drive-Through Window and Indoor Seating:** This ITE Land Use is used for the drive-through coffee shop with indoor seating. The rate is based on the use’s square footage.
- **Internal Trips:** The site’s internal trips are calculated using NEHRP 684 and ITE Methodology. The AM peak hour is anticipated to have 9% internal trips. The PM peak hour is anticipated to have 24% internal trips. The ITE spreadsheets are attached.
- **Pass-by Trips:** The ITE Trip Generation handbook and trip generation online appendices provide the following pass-by trip rate:
  - 945 Convenience Store with Gas Station:
    - 76% AM Peak Hour
    - 75% PM Peak Hour

The ITE Manuals do not have a pass-by trip rate specifically for ITE Land Use Code 937- Coffee Shop w/Drive-Through and No Indoor Seating. The two most closely matched pass-by rates are:

- 938- Coffee/Donut Shop w/ Drive-Through Window and No Indoor Seating:
  - 90% AM Peak Hour
  - 98% PM Peak Hour
- 934- Fast-Food Restaurant with Drive-Through Window and Indoor Seating
  - 50% AM Peak Hour
  - 50% PM Peak Hour

Land Use 938- Coffee/Donut Shop has no indoor seating. Therefore, to account for the patrons that would use the indoor seating as a destination, the rates for Land Use 938 and 934 are averaged. Therefore, the pass-by rate for the coffee shop on site is:

- 70% AM Peak Hour
- 77% PM Peak Hour

Following the ITE Methodology, the internal trips are removed from the total trips prior to the application of pass-by trips.

TABLE 4: PEAK HOUR TRIP GENERATION- AM PEAK HOUR

ITE Code	Units	Rate	Trips	In	Out
<b>945- Convenience Store with Gas Station</b>	3.43 ksf	40.59	139	70 (50%)	69 (50%)

#### 4.2 DEVELOPMENT TRIP DISTRIBUTION

The existing travel patterns from the traffic counts are used to estimate how the development trips will use the surrounding transportation system to access the site with modifications for reasonable origins and destinations. The trip origins/destinations are:

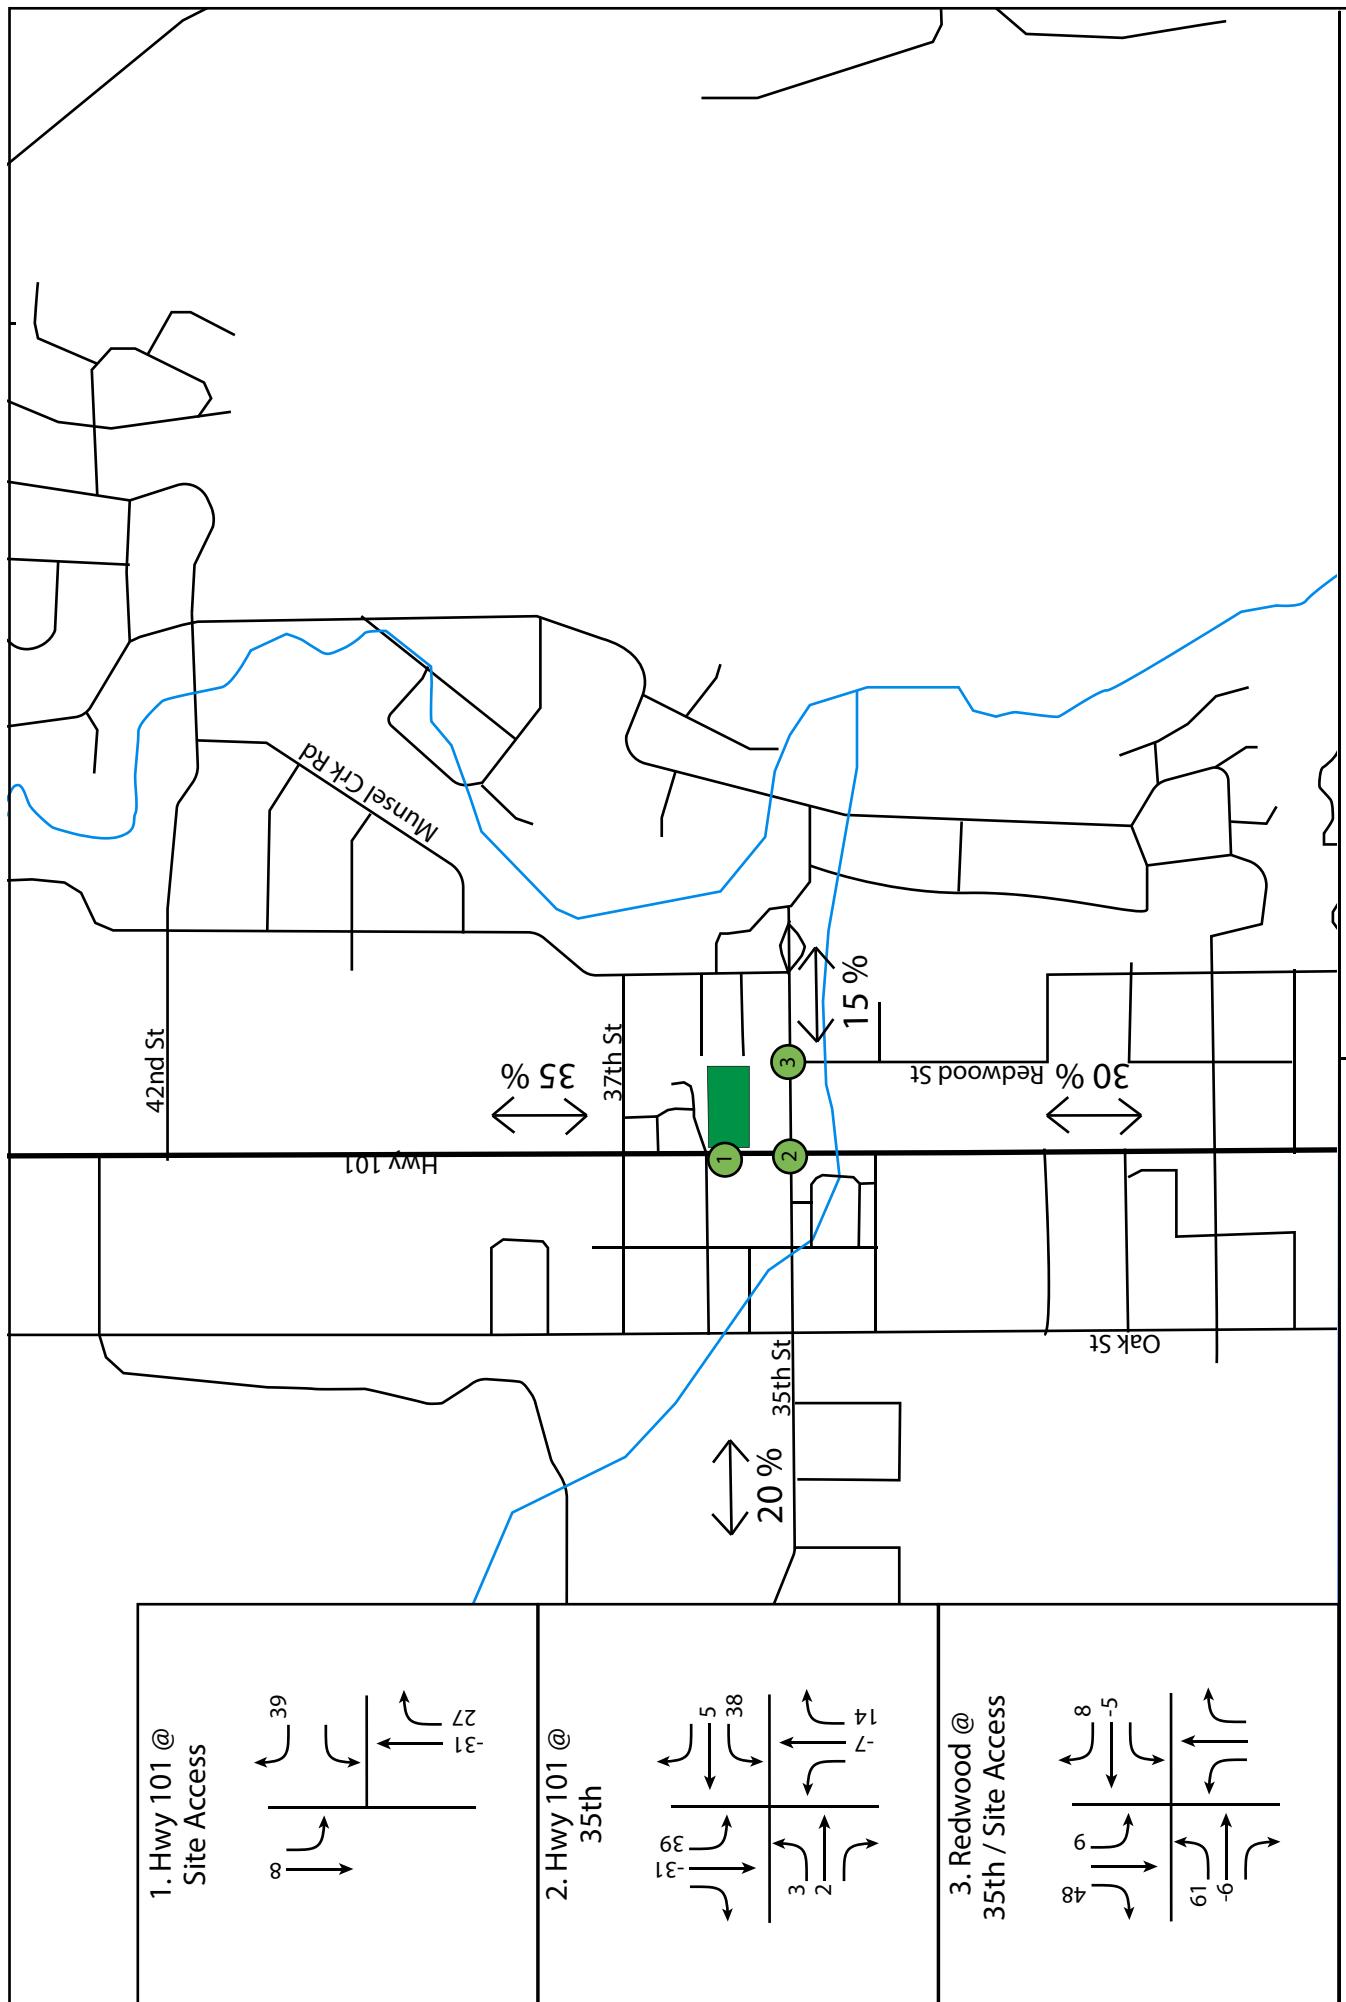

- East on 35<sup>th</sup> St= 15%
- West on 35<sup>th</sup> St= 20%
- North on Hwy 101= 35%
- South on Hwy 101= 30%

Figure 3 illustrates the development trip distribution for the AM Peak Hour and Figure 4 for the PM Peak Hour.

US Markets, Florence, OR

Figure 3: AM Development Trip Distribution

US Markets, Florence, OR

Figure 4: PM Development Trip Distribution

## 5.0 BACKGROUND TRAFFIC VOLUMES

### 5.1 INTERSECTION COUNTS

Traffic counts were collected on October 10, 2023, for the intersections of Highway 101 at 35<sup>th</sup> and 35<sup>th</sup> at Redwood and June 19, 2024, for the site access to Highway 101. The peak hours of the system occur from 8:00-9:00 AM and 4:00-5:00 PM. The counts are provided in Appendix D.

### 5.2 ADJUSTMENTS

#### **Seasonal Adjustment**

The application of seasonal adjustment factors accounts for the fact that volumes along State Highways and recreational routes tend to fluctuate from month to month due to changes in recreational behavior, etc. Monthly volume variations for routes with recreational traffic show much higher seasonal peaking than routes with predominantly intercity traffic. The roadways in Florence have a seasonal peak associated with summer recreational activities. ODOT has an Automatic Traffic Recorder (ATR) located on Highway 101 north of Florence. The data from that ATR (ATR 20-026) illustrates that the peak months for traffic are July and August.

The counts for this project were taken in October and June, which is outside of the peak month. Therefore, a seasonal adjustment factor is applied.

ODOT's Analysis Procedures Manual details the methodology for calculating the seasonal adjustment factor. The ATR Methodology using the ATR data was deemed not appropriate for this project. The ATR Methodology should not be used when the daily traffic volumes at the ATR are more than a 10% difference from the site area. The ATR has an AADT of 7,165 for the most recent year (2022). Highway 101 at 35<sup>th</sup> St has an AADT of 12,800. The study area AADT is 78% higher than the AADT at the ATR. This is due to the rural nature of the roadway at the ATR. The ATR is located north of Heceta Beach Road where Hwy 101 becomes more rural with limited access points. This means that traffic variations between the low and peak seasons will be greater at the ATR than near the project site. Due to these factors, strictly applying a factor associated with seasonal fluctuation from the ATR will overestimate traffic flow. The more appropriate method is to use ODOT's Seasonal Trend Table. The Coast Destination trend is the most appropriate to use for this study and aligns with the trend used in the City of Florence Transportation System Plan. The Coastal Destination trend is based on the peak season being the last half of August. Using the Coastal Destination trend, the SAF applied to the October counts is 1.215, and the June count is 1.09. The SAF is applied to the traffic volumes to reflect peak season conditions. The seasonal adjustment factor calculation is provided in Appendix D.

#### **In Progress Developments**

Trips from following adjacent developments are added to the background traffic volumes. These projects have been approved but are not yet completed. Therefore, the trips are not accounted for within the current traffic count data.

#### Florence Subdivision

This is a residential subdivision that has been approved but not completed. It is located at tax

lots 700 and 3800 at the NE corner of Rhododendron and 35<sup>th</sup> St. Therefore, the trips generated by this proposed development are added to the background traffic volumes.

**Fawn Ridge**

Fawn Ridge is located on Rhododendron Drive, approximately 2.5 miles north of 35<sup>th</sup> Street. The development trips from this site are added to the background traffic volumes.

**Sandpines**

A portion of Phase 1 of the Sandpines/Fairway Estates has been completed. Phase 1 is proposed at 40 lots, and 18 lots have been completed. The trip generation for the remaining 22 lots was added as background traffic. Additionally, Sandpines Phase 2 has been approved but not completed. The development trips from both phases have been added to the background traffic volumes.

**Myrtle Glen**

This residential development is located at 37<sup>th</sup> and Oak Street. Myrtle Glen is currently being constructed. Therefore, the trips from this development are added to the background traffic volumes.

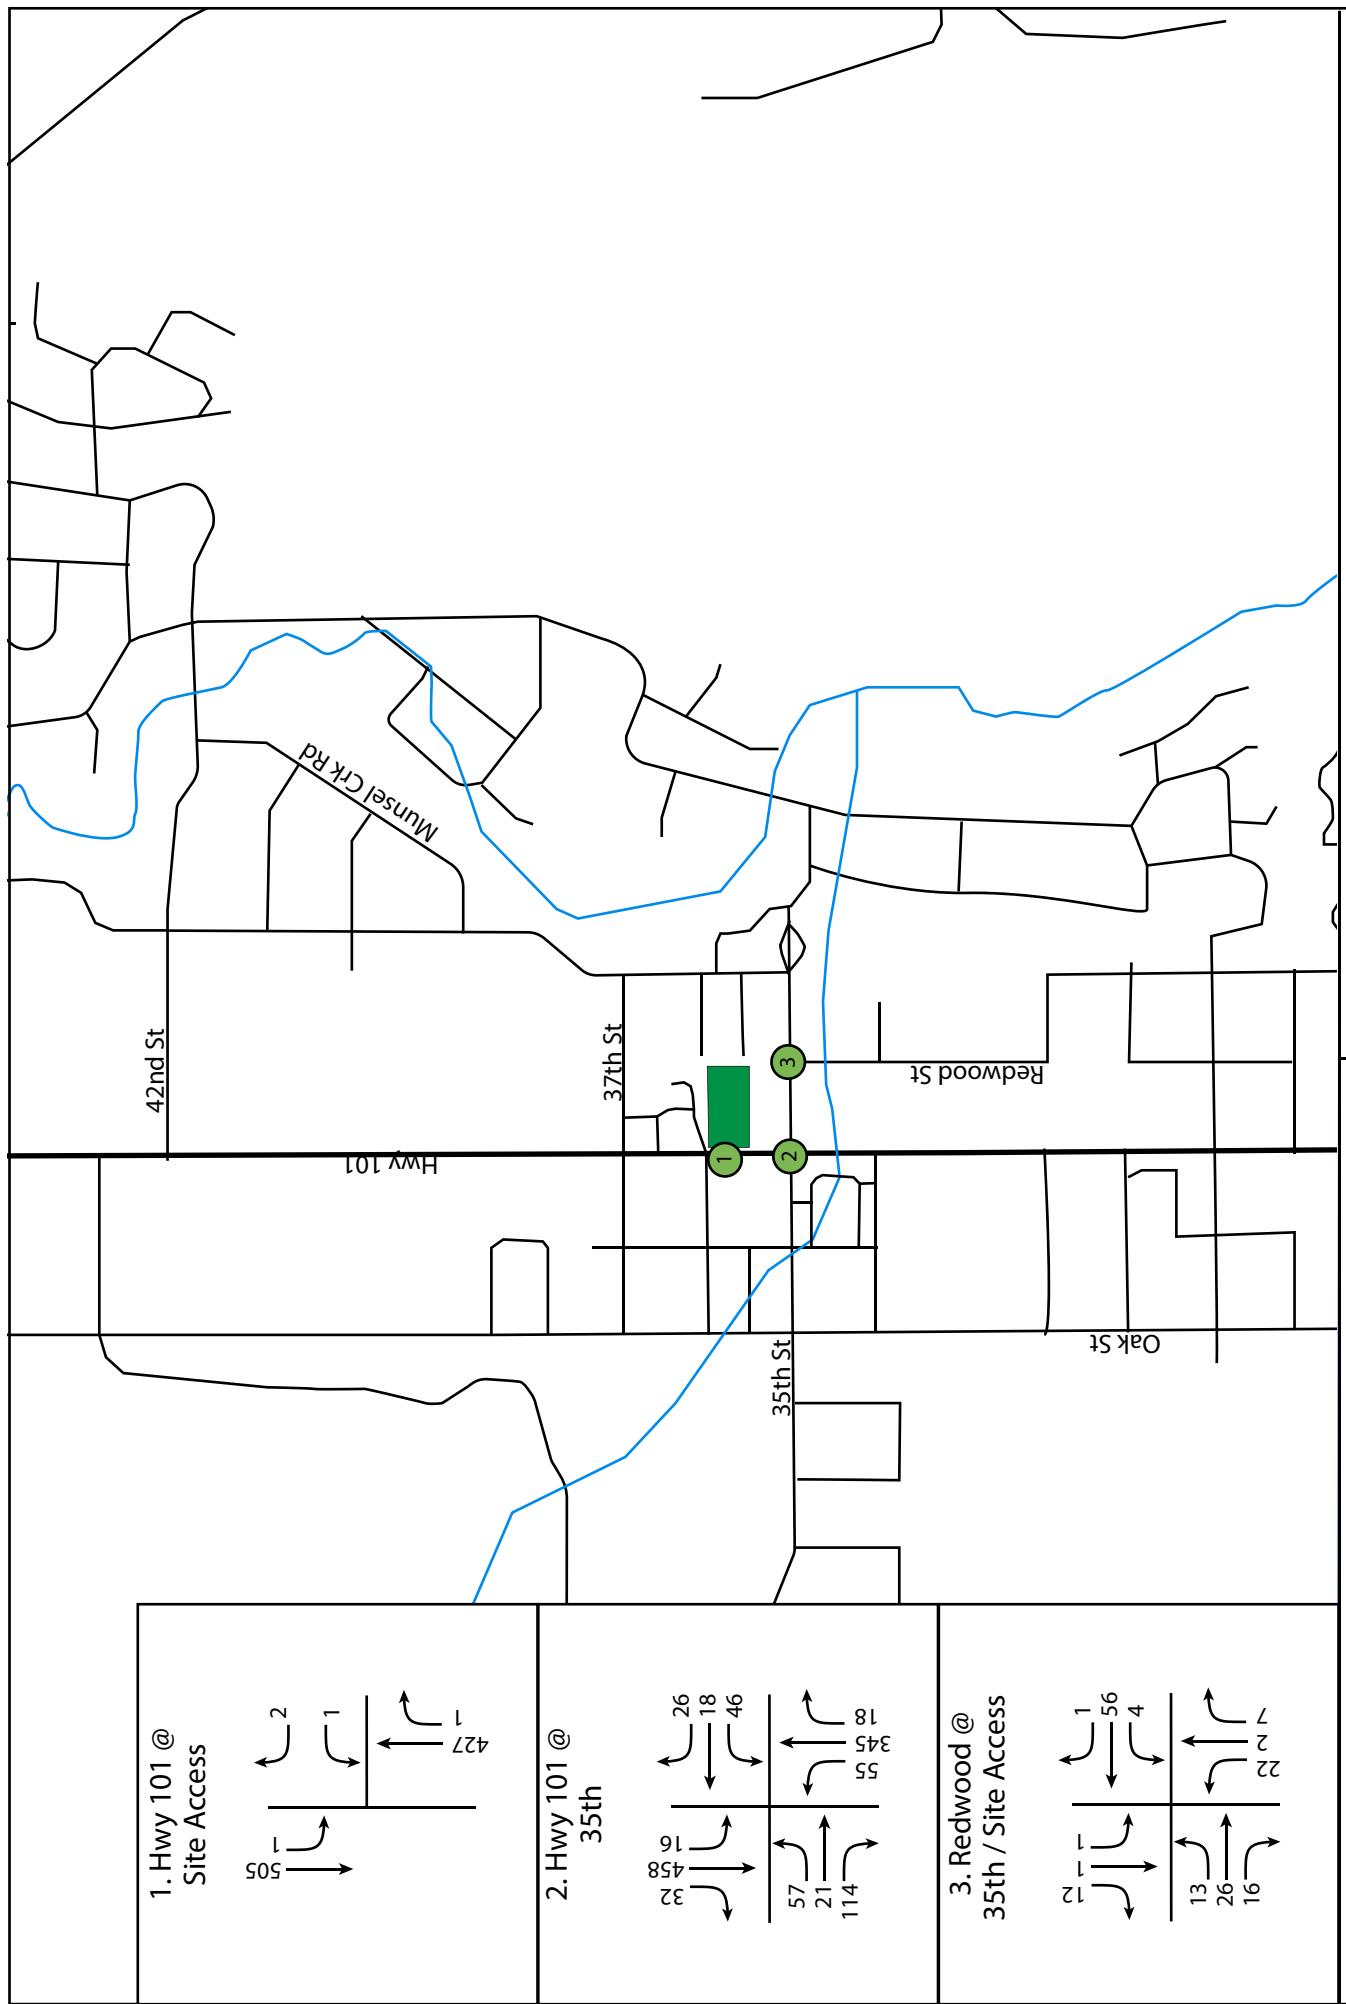

### **5.3 FUTURE YEAR BACKGROUND VOLUMES**

The proposed site development is projected to be completed by the year 2025. Consistent with the traffic impact analysis criteria, the intersections were evaluated for the year of completion and 5-year planning horizon. To account for naturally occurring traffic increases between the count year and the future analysis year, an annual growth rate is applied. ODOT's Future Volume tables illustrate a nominal growth rate. The City of Florence's TSP update predicts a growth rate of 1% at adjacent intersections. Therefore, a 1% growth rate was used.

### **5.4 FINAL TRAFFIC VOLUMES**

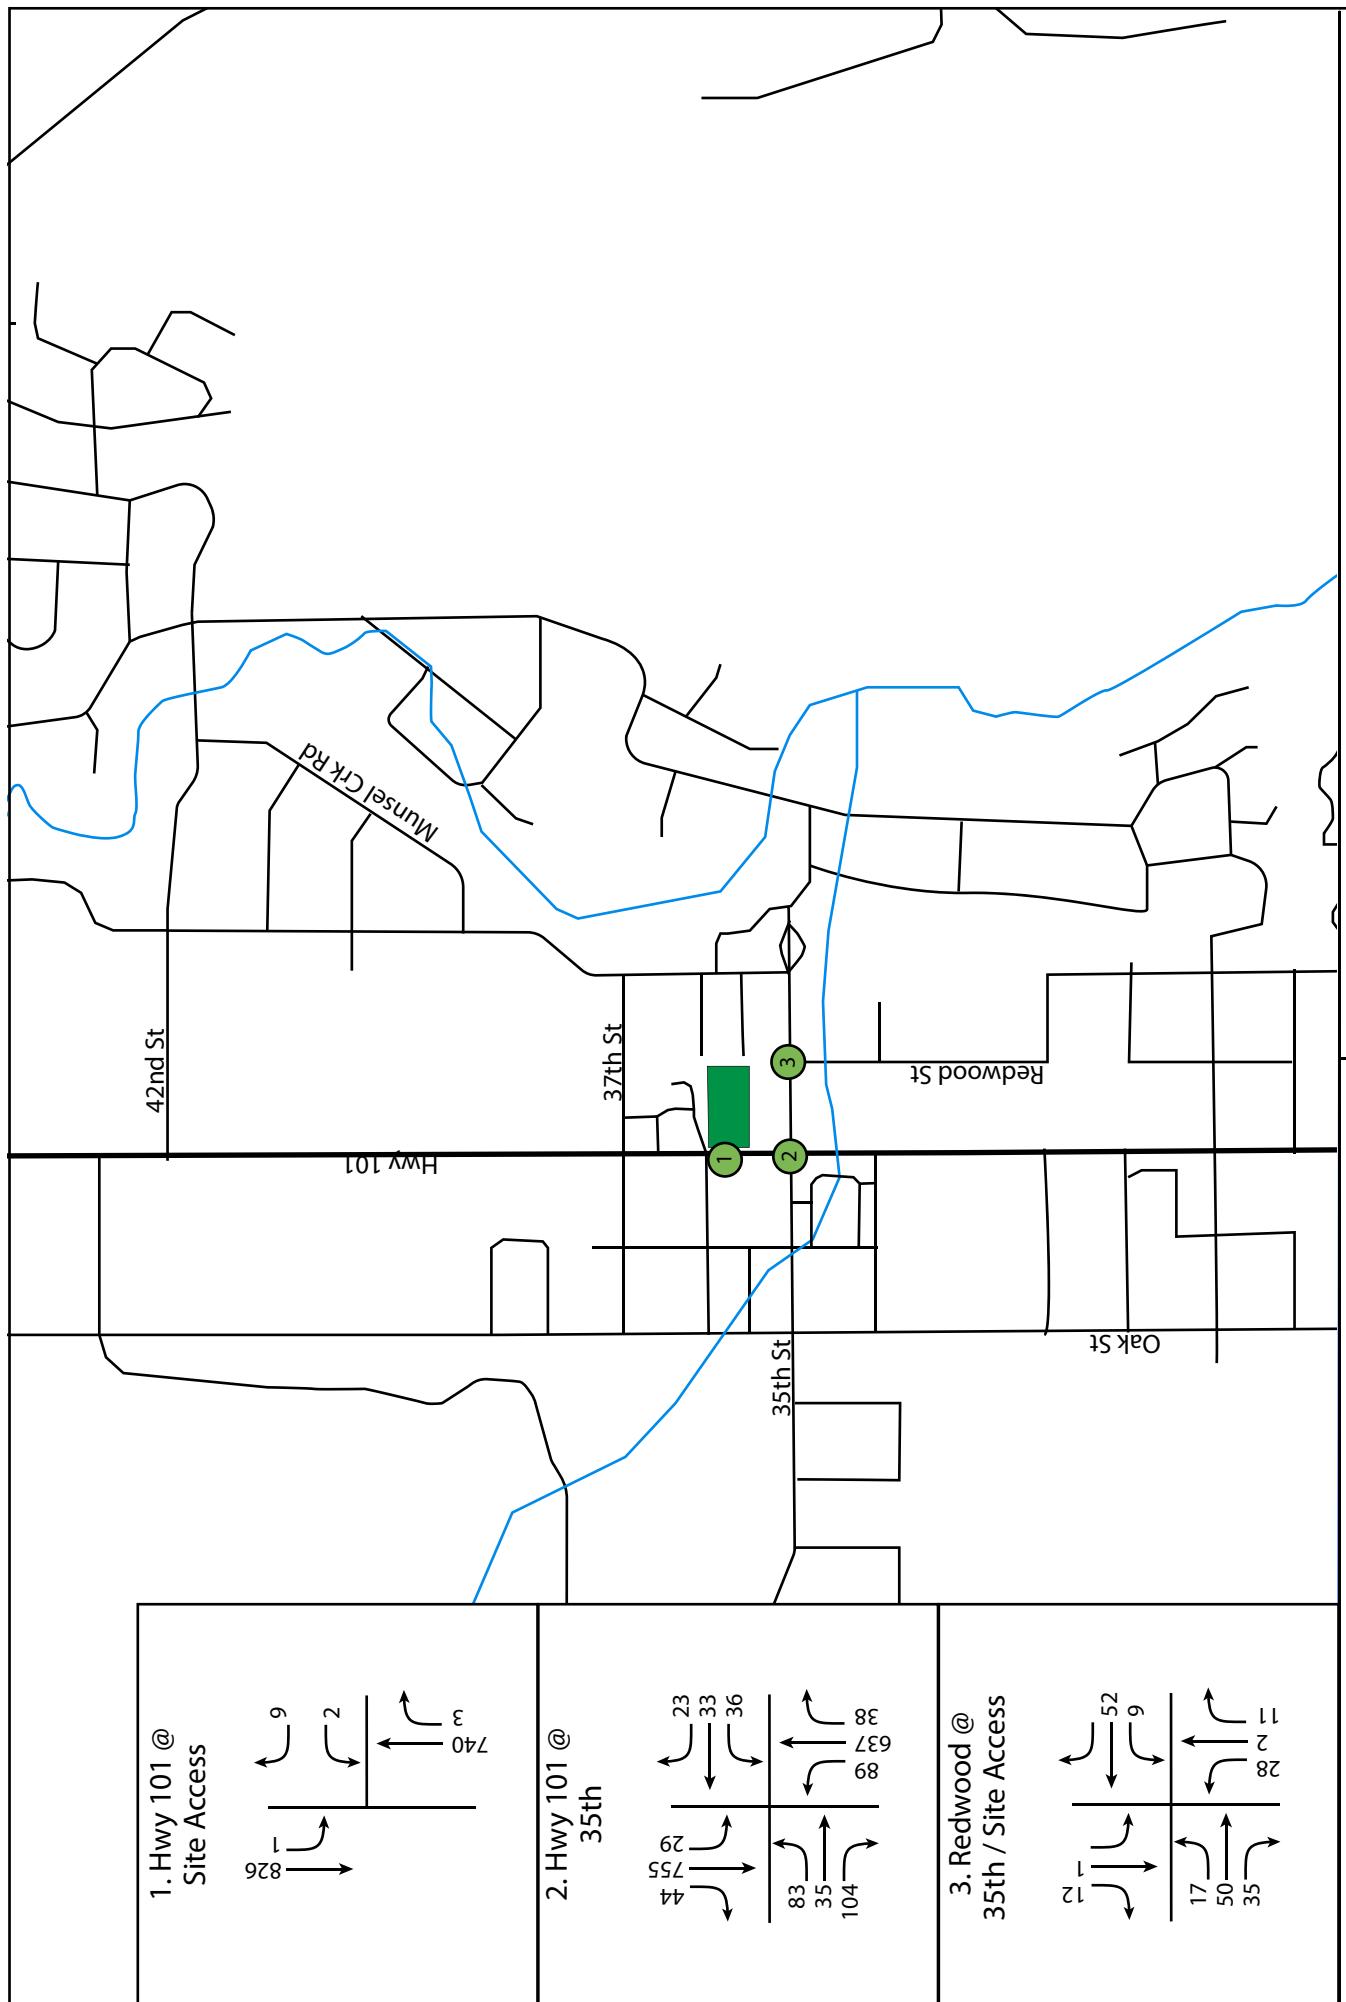

The existing traffic volumes were adjusted according to the methodology described above. Appendix D provides the traffic volume calculations. The development trips are added to the background traffic volumes to represent the build conditions. The traffic volumes are illustrated in the following figures:

- Figure 5- Year 2024 AM Peak Hour Existing Traffic Volumes
- Figure 6- Year 2024 PM Peak Hour Existing Traffic Volumes
- Figure 7- Year 2025 AM Peak Hour Traffic Volumes

## 6.0 INTERSECTION ANALYSIS

### 6.1 PERFORMANCE MEASURES

The measure of performance for the intersections within the study area is the volume-to-capacity ratio (v/c) and Level of Service (LOS).

The volume-to-capacity ratio (v/c) describes the capability of an intersection to meet volume demand based on the maximum number of vehicles that could be served in an hour. Highway 101 is under the jurisdiction of ODOT, and ODOT uses the v/c standard. The v/c standard is based on traffic control, roadway speed, and street classification as defined in the Oregon Highway Plan. Highway 101 is a statewide highway, not a freight route, and has a posted speed of 40 mph within the study area. At stopped controlled intersections, the v/c standard is 0.85 for the Highway 101 approaches and 0.90 for the side streets. At signalized intersections, the v/c is 0.85. The City of Florence has a v/c standard for signalized intersections but not for stop-controlled intersections. Therefore, the v/c standard is not used for the studied intersections under the City of Florence's jurisdiction.

LOS is a measure of performance for intersections in this analysis and is based on the Highway Capacity Manual (HCM). LOS is a concept developed to quantify the degree of comfort (including such elements as travel time, number of stops, total amount of stopped delay, and impediments caused by other vehicles) afforded to drivers as they travel through an intersection or along a roadway segment. It was developed to quantify the quality of service of transportation facilities.

LOS is based on average delay, defined as the average total elapsed time from when a vehicle stops at the end of a queue until the vehicle departs from the stop line. The average delay is measured in seconds per vehicle per hour and then translated into a grade or "level of service" for each intersection. LOS ranges from A to F, with A indicating the most desirable condition and F indicating the most unsatisfactory condition. The LOS criteria, as defined by the Highway Capacity Manual for intersections, are provided in Table 7. The City of Florence has a standard of LOS E for stop-controlled intersections.

TABLE 7: HCM LEVEL OF SERVICE FOR INTERSECTIONS

	<b>Stopped Delay Per Vehicle (Seconds per Vehicle)</b>	
	<b>Unsignalized Intersections</b>	<b>Signalized Intersections</b>
<b>A</b>	$\leq 10.0$	$\leq 10$
<b>B</b>	$> 10.0 \text{ and } \leq 15.0$	$> 10 \text{ and } \leq 20$
<b>C</b>	$> 15.0 \text{ and } \leq 25.0$	$> 20 \text{ and } \leq 35$
<b>D</b>	$> 25.0 \text{ and } \leq 35.0$	$> 35 \text{ and } \leq 55$
<b>E</b>	$> 35.0 \text{ and } \leq 50.0$	$> 55 \text{ and } \leq 80$
<b>F</b>	$> 50.0$	$> 80$

## 6.2 INTERSECTION ANALYSIS RESULTS

A performance analysis was conducted for the studied intersections for the Years 2024, 2025, and 2030 conditions during the AM and PM peak hours. The intersection evaluation was performed using Synchro 10 following the HCM 6 critical movement methodology outlined in ODOT's analysis Procedures Manual. The results are shown in Table 8 for the AM peak hour and Table 9 for the PM peak hour. The SYNCHRO outputs are provided in Appendix E.

TABLE 8: INTERSECTION PERFORMANCE: WEEKDAY AM PEAK HOUR

Intersection	Mobility Standard LOS	2024	2025 Background	2025 Build	2030 Background	2030 Build
<b>Highway 101 at 35<sup>th</sup> St</b>	v/c 0.85	0.45	0.45	0.45	0.49	0.47
<b>Redwood at 35<sup>th</sup> St*</b>	LOS E	A	A	B	A	B
<b>Highway 101 at Site Access*</b>	v/c 0.85/0.90	A	A	B	B	B

\*Results reported for highest movement for stop-controlled intersections

TABLE 9: INTERSECTION PERFORMANCE: WEEKDAY PM PEAK HOUR

Intersection	Mobility Standard LOS	2024	2025 Background	2025 Build	2030 Background	2030 Build
<b>Highway 101 at 35<sup>th</sup> St</b>	v/c 0.85	0.58	0.60	0.58	0.60	0.59
<b>Redwood at 35<sup>th</sup> St*</b>	LOS E	A	B	B	B	B
<b>Highway 101 at Site Access*</b>	v/c 0.85/0.90	B	B	B	B	B

\*Results reported for highest movement for stop-controlled intersections

As illustrated in Tables 8 and 9, all intersections meet the mobility standards.

## 6.3 QUEUE ANALYSIS

A queuing analysis was conducted for the studied intersections. The analysis was performed using SimTraffic, a microsimulation software tool that uses the HCM-defined criteria to estimate the queuing of vehicles within the study area. The average and 95<sup>th</sup> percentile queuing results are illustrated in Table 10 for the AM Peak Hour and Table 11 for the PM peak hour. All results are rounded to 25 feet to represent the total number of vehicles in the queue, as one vehicle typically occupies 25 feet of space. The SimTraffic outputs are provided in Appendix F.

TABLE 10: INTERSECTION QUEUING: WEEKDAY AM PEAK HOUR

Intersection		Available Storage (Feet)	2024 Background (Feet)		2025 Background (Feet)		2025 Build (Feet)		2030 Background (Feet)		2030 Build (Feet)

	SB	LTR	100	50	25	50	25	50	25	50	25	50	50
<b>Hwy 101 @ Site Access</b>	WB	R	75	50	25	50	25	50	25	50	25	50	25

Any movement not included in the table has a queue of 0 feet.

As demonstrated in Tables 10 and 11, the addition of development traffic does not substantially increase the queuing conditions at the studied intersections.

## 7.0 TURN POCKET EVALUATION

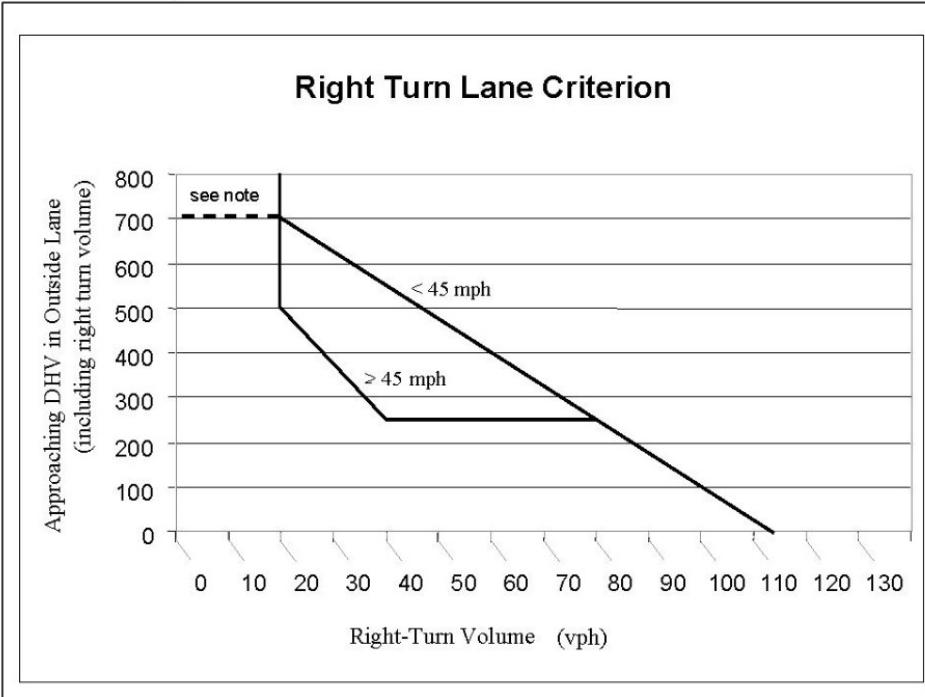

The intersections of Highway 101 at 35<sup>th</sup> St and Redwood at 35<sup>th</sup> St were evaluated for the need for turn pockets. The evaluation follows ODOT Methodology as outlined in the Analysis Procedures Manual. The evaluation considers the volume of turning trips and the volume of trips on the mainline as the starting point, and then an evaluation of feasibility and increase in safety should be considered to determine if a turn pocket is appropriate. Table 12 and the following graphs provide the values used for the evaluation and the results. As demonstrated in Table 12, no additional turn pockets are required.

TABLE 12: TURN LANE WARRANTS- YEAR 2030 WITH DEVELOPMENT

Location	Maine Line Volumes	Turning Volumes	Warrant met
<b>AM Peak Hour</b>			
<b>Hwy 101 at 35<sup>th</sup></b>			
Northbound Right	216	34	No
Southbound Right	264	41	No
<b>Redwood at 35<sup>th</sup></b>			
Eastbound Right	142	17	No
Eastbound Left	213	103	Yes
Westbound Right	75	15	No
Westbound Left	114	4	No
<b>Hwy 101 at Site Access</b>			
Northbound Right	285	50	No
<b>PM Peak Hour</b>			
<b>Hwy 101 at 35<sup>th</sup></b>			
Northbound Right	391	54	No
Southbound Right	443	57	No
<b>Redwood at 35<sup>th</sup></b>			
Eastbound Right	73	8	No
Eastbound Left	231	79	Yes
Westbound Right	166	37	No
Westbound Left	160	9	No
<b>Hwy 101 at 35<sup>th</sup></b>			
Northbound Right	414	30	No

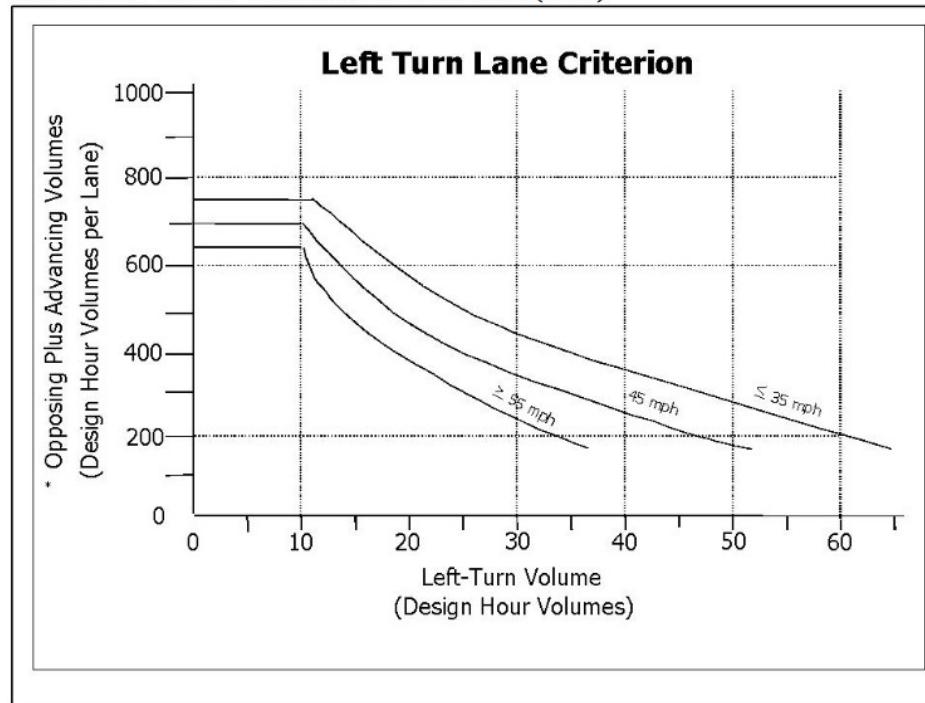

The eastbound left turn movement meets the volume criteria for the consideration of a separate turn pocket. This movement will experience an average delay of less than 8 seconds and a maximum queue of 2 vehicles through the year 2030. This is due to the low volume of opposing vehicles. The speed of 35<sup>th</sup> Street is 25 mph and there have been no reported crashes at this location. The left-turn pocket would not provide a safety benefit. Therefore, a left-turn pocket is not recommended.

**Exhibit 12-2 Right Turn Lane Criterion**

Note: If there is no right turn lane, a shoulder needs to be provided. If this intersection is in a rural area and is a connection to a public street, a right turn lane is needed.

**Exhibit 12-1 Left Turn Lane Criterion (TTI)**

\*(Advancing Volume/Number of Advancing Through Lanes) + (Opposing Volume/Number of Opposing Through Lanes)

Opposing left turns are not counted as opposing volumes

## 8.0 CONCLUSION

The report provides a Traffic Impact Analysis and findings prepared for the proposed US Markets Convenience Store and Gas Station located in Florence, Oregon.

### FINDINGS

- All intersections meet the applicable operational standards for both the AM and PM peak hours.
- The addition of development trips does not trigger intersection mitigation.
- The addition of development trips does not negatively increase queuing conditions at the study area intersections.
- The crash rates and crash patterns in the study area do not trigger mitigation.

## Scope of Work

## APPENDIX A:

Florence Gas Station

## TECH MEMO

---

DATE: June 13, 2024

TO: Arielle Childress  
Oregon Department of Transportation

FROM: Kelly Sandow P.E.  
Sandow Engineering

RE: Scope of Work- Florence Convenience Store and Gas Station

---

The following provides the trip generation estimate and recommended Scope of Work for the proposed convenience store and gas station located on Highway 101 between 35<sup>th</sup> Street and 36<sup>th</sup> Street in Florence, Oregon.

### **SITE INFORMATION**

The site is located on Tax Lot 800 of Assessor's Map 18-12W-23-22 and is located on the east side of Highway 101 between 35<sup>th</sup> Street and 36<sup>th</sup> Street just north of the Burger King. The site is approximately 0.99 acres and is currently vacant.

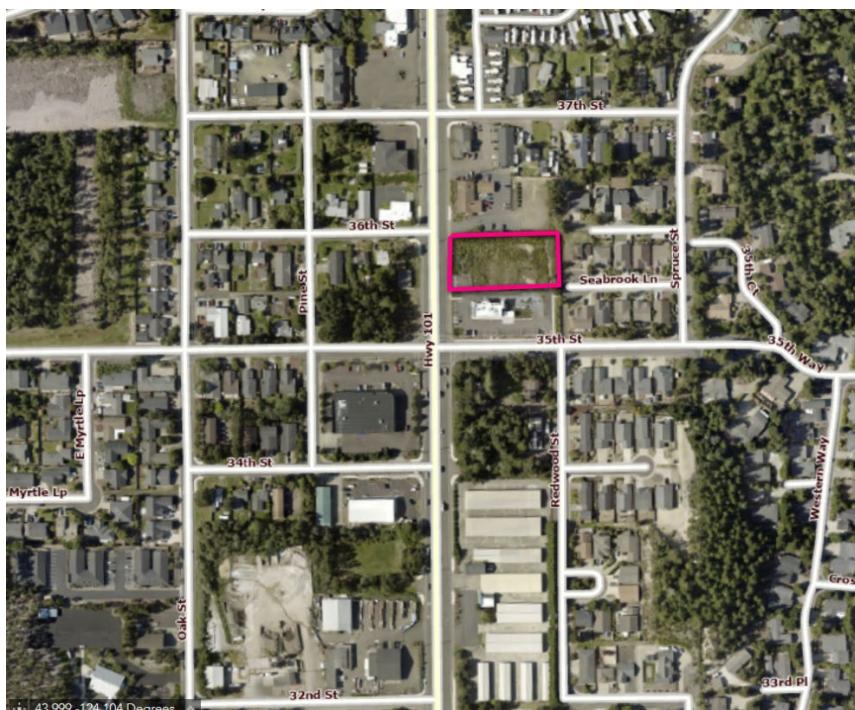

Access to the site will be via an existing right-in right-out driveway to Highway 101 and a full-movement driveway to 35<sup>th</sup> Street. Both accesses are shared with the Burger King located to the south of the project site.

The site is currently zoned Highway Commercial. The development proposal is allowed within the zoning. No zone change is required.

Re: TIA Scope of Work

Date: 6.13.24

Page 2

**Site Location**

## **DEVELOPMENT PROPOSAL**

The applicant is proposing the development of a 3,434-square-foot convenience store with an attached 2,201-square-foot coffee shop with a drive-through pickup lane and gas station with 8 vehicle fueling positions. All accesses will remain in their existing configuration. The site plan is attached.

### **Trip Generation**

The ITE Trip Generation Manual 11<sup>th</sup> ed is used to estimate the AM and PM peak hour trip generation. Tables 1 and 2 provide the trip generation estimates. The most reasonable ITE Land Uses/rates for each use are:

- **945- Convenience Store with Gas Station:** This land use includes the convenience store and fuel pumps only. The convenience store does not include the attached coffee shop. ITE provides trip rates using a subcategory of square feet of the convenience store or vehicle fueling positions. The primary use will be the vehicle fueling stations, with the convenience store as a secondary use. Therefore, the number of vehicle fueling positions is the appropriate subcategory to use. The convenience store square footage is used as the independent variable.

Re: TIA Scope of Work

Date: 6.13.24

Page 3

- **937- Coffee/Donut Shop with Drive-Through Window and Indoor Seating:** This ITE Land Use is used for the drive-through coffee shop with indoor seating. The rate is based on the use's square footage.
- **Internal Trips:** The site's internal trips are calculated using NEHRP 684 and ITE Methodology. The AM peak hour is anticipated to have 9% internal trips. The PM peak hour is anticipated to have 24% internal trips. The ITE spreadsheets are attached.
- **Pass-by Trips:** The ITE Trip Generation handbook and trip generation online appendices provide the following pass-by trip rate:
  - 945 Convenience Store with Gas Station:
    - 76% AM Peak Hour
    - 75% PM Peak Hour
  - 937- Coffee/Donut Shop w/ Drive-Through and Indoor Seating:
    - 90% AM Peak Hour
    - 98% PM Peak Hour

TABLE 1: PEAK HOUR TRIP GENERATION- AM PEAK HOUR

ITE Code	Units	Rate	Trips	In	Out
<b>945- Convenience Store with Gas Station</b>	3.43 ksf	40.59	139	70 (50%)	69 (50%)

## **ANALYSIS PARAMETERS**

The following analysis is proposed for this project.

- Years
  - 2024- Existing
  - 2026- Full Build Out
  - 2031- 5 years after buildout
- PM Peak Period 4-6 PM
- AM Peak Period 7-9 PM
- Growth Rate: As per TSP
- Analysis to include:
  - LOS
  - V/C
  - Queuing
  - Crash Analysis
  - Mitigation evaluation, including signal warrants, turn pockets, etc.
  - Change of use at Highway 101 access
  - Turn lane evaluation at all site access points
- Proposed intersections to be studied:
  - Hwy 101 at Site Access
  - Hwy 101 at 35<sup>th</sup> Street
  - 35<sup>th</sup> Street at Site Access

**Cc:** BAUMGARTNER Douglas G  
**Subject:** RE: Florence Gas Station Scope of Work  
**Date:** Monday, June 24, 2024 3:42:10 PM

---

Kelly,

I've reviewed the scoping memo for the proposed Florence Gas Station development in Florence, OR and have the following comments:

- Trip Generation:
  - Pass-by rate for LUC 937 utilized rates for LUC 938, which doesn't have any indoor seating. Recommend lowering pass-by rate as this land use most likely has more customers traveling to it as a destination. Consider using rates from LUC 934 or average LUC 934 and 938.
  - The internal capture spreadsheet for AM peak hour has slightly incorrect base volumes input.
  - Internal capture trips should be fully removed prior to applying pass-by rates. Recommend using Tables 9-P (D) and 9-P (O) to determine external trips by land use.
- In the final TIA, please provide overall trip distribution percentages to aid in review of trip assignment.

If you have any questions please feel free to reach out.

Thanks!

*Disclaimer: The information contained in this report is compiled from individual driver and police crash reports submitted to the Oregon Department of Transportation as required in ORS 811.720. The Crash Analysis and Reporting Unit is committed to providing the highest quality crash data to customers. However, because submittal of crash report forms is the responsibility of the individual driver, the Crash Analysis and Reporting Unit can not guarantee that all qualifying crashes are represented nor can assurances be made that all details pertaining to a single crash are accurate. Note: Legislative changes to DMV's vehicle crash reporting requirements, effective 01/01/2004, may result in fewer property damage only crashes being eligible for inclusion in the Statewide Crash Data File.*

Table 5-A: Computations Summary

	Total	Entering	Exiting
All Person-Trips	329	166	163
Internal Capture Percentage	9%	9%	9%
External Vehicle-Trips <sup>5</sup>	299	151	148
External Transit-Trips <sup>6</sup>	0	0	0
External Non-Motorized Trips <sup>6</sup>	0	0	0

Table 6-A: Internal Trip Capture Percentages by Land Use

Land Use	Entering Trips	Exiting Trips
Office	N/A	N/A
Retail	9%	13%
Restaurant	9%	6%
Cinema/Entertainment	N/A	N/A
Residential	N/A	N/A
Hotel	N/A	N/A

<sup>1</sup>Land Use Codes (LUCs) from *Trip Generation Manual*, published by the Institute of Transportation Engineers.

<sup>2</sup>Total estimate for all other land uses at mixed-use development site is not subject to internal trip capture computations in this estimator.

<sup>3</sup>Enter trips assuming no transit or non-motorized trips (as assumed in ITE *Trip Generation Manual*).

<sup>4</sup>Enter vehicle occupancy assumed in Table 1-A vehicle trips. If vehicle occupancy changes for proposed mixed-use project, manual adjustments must be made to Tables 5-A, 9-A (O and D). Enter transit, non-motorized percentages that will result with proposed mixed-use project complete.

<sup>5</sup>Vehicle-trips computed using the mode split and vehicle occupancy values provided in Table 2-A.

<sup>6</sup>Person-Trips

\*Indicates computation that has been rounded to the nearest whole number.

<b>Project Name:</b>	Florence Gas Station
<b>Analysis Period:</b>	AM Street Peak Hour

Residential	N/A	N/A
Hotel	N/A	N/A

<sup>1</sup>Land Use Codes (LUCs) from *Trip Generation Manual*, published by the Institute of Transportation Engineers.

<sup>2</sup>Total estimate for all other land uses at mixed-use development site is not subject to internal trip capture computations in this estimator.

<sup>3</sup>Enter trips assuming no transit or non-motorized trips (as assumed in ITE *Trip Generation Manual*).

<sup>4</sup>Enter vehicle occupancy assumed in Table 1-P vehicle trips. If vehicle occupancy changes for proposed mixed-use project, manual adjustments must be made.

<sup>5</sup>Vehicle-trips computed using the mode split and vehicle occupancy values provided in Table 2-P.

<sup>6</sup>Person-Trips

\*Indicates computation that has been rounded to the nearest whole number.
